## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to claims 41-59 have been considered but are moot in view of the new ground(s) of rejection.

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 41-44 and 47-49 are rejected under 35 U.S.C. 102(e) as being anticipated by Yang et al. (U.S. Patent # 6,404,175).

Yang et al. disclose the claimed invention a DC-DC converter (figure 4), including a comparator (figure 2, item 208) and a first signal (figure 2, from item VREF) and an offset signal (figure 2, item output of item 212), pulse width modulation (figure 2, item

PWM), the output voltage different than pre established value (column 3, line 55-65), a pair of switches (figure 2, item Q1 and Q2) and a periodic reference (column 3, line 60-65).

3. Claims 50 is rejected under 35 U.S.C. 102(b) as being anticipated by Barkaro (U.S. Patent # 5,949,224).

Barkaro discloses claimed invention a DC-DC converter (figure 1, and column 1, line 10-15), a comparator (figure 1, item 4 and 5), the converter towards a pre established value (Abstract, line 1-7).

4. Claims 52-59 rejected under 35 U.S.C. 102(e) as being anticipated by Redl et al. (U.S. Patent # 6,229,292).

Redl et al. disclose the claimed invention a DC-DC converter (figure 1, 9, 13 and 16), a comparator (figure 1, item 22 and 28), a comparator, pulse width modulator and reference voltage, a microprocessor (column 3, line 40-70+), a pair of switches (figure 1, item 12 and 16 and metal oxide semiconductor field transistor (column 2, line 10-15).

### ***Double Patenting***

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA

Art Unit: 2838

1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 41-59 are rejected under the judicially created doctrine of obviousness-

type double patenting as being unpatentable over claims 13-23 of U.S. Patent No.

6,459,602. Although the conflicting claims are not identical, they are not patentably

distinct from each other because both the sets of the claims drawn to a DC-DC

converter claiming a comparator compare a first signal representative of an output

voltage of DC-DC converter with periodic reference signal having a offset determined by

reference voltage source and output voltage, a pulse width modulated signal, the pre-

established value, a driver drives a pair of switches, a pair of switches are MOSFETs.
